

MEMORANDUM

September 8, 1997
BRC-SMS-315

TO: Dan Summers
Legal Department

FROM: Mario Stavale
Boeing Realty Corporation

SUBJECTS: 1) Areas 2 & 6 Soil Characterization Report Draft
2) Well Redevelopment and Sampling Program - 7/22/97

Kennedy/Jenks has submitted for BRC's review its draft report concerning the final segment of the current soil characterization program of the C-6 facility. If possible, please provide your comments and suggestions concerning the report to me by Friday, September 19th.

In addition, I enclose for your file the most recent C-6 groundwater monitoring well test results. A ten (10) week sampling program was implemented as part of BRC's redevelopment of the monitoring wells located on the property. Note the significant drop in the TCE level of DAC P-1 as well as the TCE level in WCC-6S. Kennedy/ Jenks is in the process of fully researching this anomaly (the laboratory data of the 8/4/97 sampling event, report pending, show the return to historically reconcilable TCE levels in these wells).
